In this challenge, the task is to debug the existing code to successfully execute all provided test files.

Consider that vowels in the alphabet are a, e, i, o, u and y.

Function `score_words` takes a list of lowercase words as an argument and returns a score as follows:

The score of a single word is **2** if the word contains an even number of vowels. Otherwise, the score of this word is **1**. The score for the whole list of words is the sum of scores of all words in the list.

Debug the given function `score_words` such that it returns a correct score.

Your function will be tested on several cases by the locked template code.

## Input Format

The input is read by the provided locked code template. In the first line, there is a single integer ***n*** denoting the number of words. In the second line, there are ***n*** space-separated lowercase words.

## Constraints

- $1 \leq n \leq 20$
- Each word has at most **20** letters and all letters are English lowercase letters

## Output Format

The output is produced by the provided and locked code template. It calls function `score_words` with the list of words read from the input as the argument and prints the returned score to the output.

## Sample Input 0

```
2
hacker book
```

## Sample Output 0

```
4
```

## Explanation 0

There are two words in the input: hacker and book. The score of the word hacker is **2** because it contains an even number of vowels, i.e. **2** vowels, and the score of book is **2** for the same reason. Thus the total score is  **$2 + 2 = 4$** .

## Sample Input 1

```
3
programming is awesome
```

## Sample Output 1

4

**Explanation 1**

There are **3** words in the input: programming, is and awesome. The score of programming is **1** since it contains **3** vowels, an odd number of vowels. The score of is is also **1** because it has an odd number of vowels. The score of awesome is **2** since it contains **4** vowels, an even number of vowels. Thus, the total score is **1 + 1 + 2 = 4**.

Language

Python 3

```
1 def is_vowel(letter):
2     return letter in ['a', 'e', 'i', 'o', 'u', 'y']
3
4 def score_words(words):
5     score = 0
6     for word in words:
7         num_vowels = 0
8         for letter in word:
9             if is_vowel(letter):
10                num_vowels += 1
11            if num_vowels % 2 == 0:
12                score += 2
13            else:
14                score += 1
15        return score
16
17 ...
```
